AdriaScan: Ensuring Secure Software for Their Customers with Spectra Assure

AdriaScan develops software for the hospitality industry for more than 2,500 customers in 110 countries, ranging from corporate hotels in large resorts to small motels and camping sites. Software security assurance is a top priority for the company and its customers, because AdriaScan's solutions speed up check-in processes, eliminating manual data entry, typing mistakes, paper-based photocopying, and storing of digital documents.

Spectra Assure™ assesses every release build in its entirety in minutes, providing a comprehensive analysis of risks and threats before software is shipped to customers.

Spectra Assure deconstructs proprietary, commercial, and open-source components, plus any artifacts added during compilation for malware, tampering, suspicious behaviors, secrets leakage, and more. It also provides remediation prioritization, enabling AdriaScan's small development team to efficiently address risk.

“ Spectra Assure serves as a critical checkpoint or build exam before we ship our product to customers. ”

Boris Antonić, CEO, AdriaScan

CHALLENGES:

- Ensure customers' software is safe
- Manage risk in software components
- Manage third-party commercial software risk

SOLUTION:

- Spectra Assure provides the most comprehensive SBOM and risk assessment for pre-release of builds and commercial software before deployment

“My team and I found using Spectra Assure is very easy, providing us with information in a matter of minutes,” said Boris Antičić, CEO of AdriaScan. “It offered everything we are looking for, a detailed analysis of each file explanation, whether the components are vulnerable or outdated, simple and straightforward UI, shareable reports, version history, and much more.”

The analysis generates the Spectra Assure SAFE Report which provides a comprehensive software bill of materials (SBOM) and risk assessment. “We started to think about security a long time ago,” said Antičić. “A great experience is important and I want our customers to feel the same when using our products. That is why we use Spectra Assure to ensure the customer’s safety.”

Shareable Reports Drive Software Quality

Like many software companies, AdriaScan uses various open-source components and third-party software development kits (SDKs) to speed up development of new solutions and capabilities. Spectra Assure SAFE Report delivers a comprehensive SBOM and risk assessment, making it easy to understand the issues embedded in each component.

“In a few instances, we have found issues in the SDKs we use,” said Antičić. “Now we can share the reports with those vendors, so they can address the issue we’ve found.”

RESULTS:

- Improved risk management with actionable insights before software is released
- Increased security assurance for customers and prospects with SAFE reports
- Improved risk management for third-party commercial software before deployment

“ Our IT department uses Spectra Assure to evaluate any new software before it is installed on our network. Also, the ability to share reports with vendors has been very helpful. ”

Boris Antičić, CEO, AdriaScan

Securing Third-Party Commercial Software

After the initial use of Spectra Assure in the software development lifecycle, AdriaScan's IT department recognized it would help identify any risk with any third-party commercial software they were using without requiring source code. IT began requesting assessments of commercial software packages before deployment on their corporate systems.

"After the initial use of Spectra Assure in the development department, our own IT department requested a test on software," continued Antonić. "Now, they use Spectra Assure to evaluate any new software before it is installed on our network."

ABOUT REVERSINGLABS

ReversingLabs is the trusted name in file and software security. We provide the modern cybersecurity platform to verify and deliver safe binaries. Trusted by the Fortune 500 and leading cybersecurity vendors, the ReversingLabs Spectra Core powers the software supply chain and file security insights, tracking over 40 billion searchable files daily with the ability to deconstruct full software binaries in seconds to minutes. Only ReversingLabs provides that final exam to determine whether a single file or full software binary presents a risk to your organization and your customers.
